How the grid works

The machine has 5 reels and 3 rows, for a total of 15 symbol positions.

After every spin the machine checks 14 lines:

- 3 horizontal rows of 5 cells,
- 5 vertical columns of 3 cells,
- 6 diagonals of 3 cells (3 running down-right, 3 running up-right).

Because columns and diagonals are only 3 cells long, combinations of 4 or 5 symbols can only happen on a horizontal row.

Three rules that apply to everything below

1. Symbols must be next to each other on the same line.
Symbols scattered around the grid never pay, no matter how many appear.
2. Every winning line pays.
A single spin can trigger several combinations at once, on different lines or even on the same line, and all the points are added together. One symbol can belong to more than one winning line.
3. Longer runs replace shorter ones, they don't add to them. Four identical symbols pay 160, not 160 plus 60.
The same applies to symbol groups: only the longest one on each line pays.

1 — Identical symbols

Any symbol, repeated on consecutive cells of the same line.

Combination	Where it can appear	Points
3 identical	any line, any direction	60
4 identical	horizontal row only	160
5 identical	full horizontal row	1000

2 — Symbol groups

A group symbol together with companions from its own family.
All symbols must be different from each other, next to each other on the same line, in any order.
The group symbol itself must always be one of them.

Group z17 — companions: z12, z14, z21, z31

Group z18 — companions: z16, z23, z28, z29, z30, z34

Symbols in the group combination	Where	Points
3	any line, any direction	35
4	horizontal row only	60
5	full horizontal row	80

PAYTABLE

3 — Special trios

Three specific symbols, next to each other on any line, in any order.

Symbols	Points
z3 + z4 + z5	15
z12 + z17 + z19	15
z14 + z17 + z19	20
z1 + z2 + z19	80
z10 + z15 + z19	90
z19 + z39 + z40	100
z17 + z21 + z36	110
z18 + z21 + z36	110
z19 + z21 + z36	110
z17 + z31 + z36	120
z18 + z31 + z36	120
z19 + z31 + z36	120

4 — Lucky 69

A complete horizontal row made up of only two specific symbols, both present, mixed in any order and any quantity.

Pays 69.

z1 + z19	z2 + z19	z10 + z19
z19 + z39	z19 + z40	z19 + z21
z17 + z22	z17 + z31	z15 + z18

PAYTABLE

5 — The 666

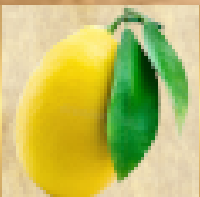

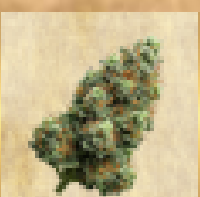

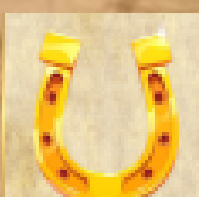

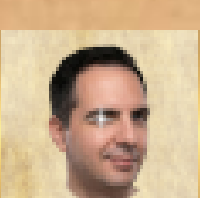

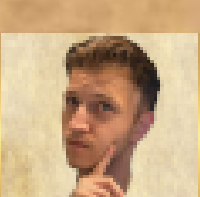

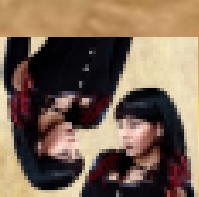

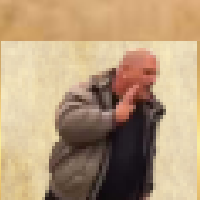

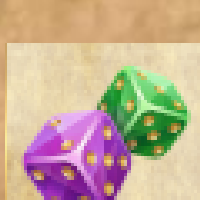

A complete horizontal row containing z17, z18, z19, z20 and z22, in any order.

Pays 666. The highest special win in the game.

Scoring example

A single spin can combine several wins. A row reading z6 – z6 – z6 – z19 – z19, with a fourth z6 directly below the first one, pays 120: 60 for the three z6 across the row, plus 60 for the three z6 down the column.
